Project Proposals

IPG – International Professional Groomers, Inc.
This is an international certification company who currently does everything in excel and would like to progress to the modern era. The must have functionality would be the client side browsing and the company side database updating and editing with some sort of user authentication. Being international, linking to the foreign pages from within the domestic site would also be a feature. This is the bare bones and leaves room for a bit more. (I do want to mention that I am open to any ideas, this is just one that is available) -

Mobile Catering Tracking App
M Pie R Catering is a fire services caterer. They need a web and mobile app that allows them to calculate meals on a large scale i.e. "I want to make the Ham and Cheese Scramble breakfast for 150 people". The app would then tell the user how many of which ingredients to order based on a database of available products from food wholesalers. The app would also need to have inventory system. There are other features that we can add, but that is a start. We could use my mom as a 'consultant'.

Sorting charities by charity type using Charity Navigator's
(http://www.charitynavigator.org/?gclid=CjwKEAiA2OzDBRCdqIyIqYaaqQoSJABeJZdixCME
hknzJ7s4tDulmS7NzdroFWjD4lulcEo34QnySBoC7CTw_wcB) ratings.- Could create a subscription that allocates monthly pledge across multiple non-profit organizations, kinda like the "acorn" app but instead of putting the money into an investment account it gives it to charity. So basically can choose charity types or specific charities that you want to donate to and either put in money, or allow access to an account, (security would be a large layer of complexity) to allow this to basically auto-donate to charities for you.
